

FREEZFLOW

PREVENT BASEMENT FLOODING WITH FREEZFLOW

In winter, sump pump discharge lines can freeze, causing blockages that keep your pump running continuously — **risking failure** and **basement flooding**.

FreezFlow connects the 1 1/2" sump pump discharge to a larger 4" exterior line, featuring specially designed vents that **allow water to escape** even if the outdoor line is blocked by snow, ice, or debris.

It also helps during heavy rains by dispersing **excess stormwater** if storm sewers are overwhelmed.

KEY BENEFITS:

- Prevents flooding from frozen discharge lines
 - Keeps water flowing even with exterior blockages
 - Reduces risk of backups during heavy rain
